Nortek Security & Control Showcases Smart Garage Door Controller

The GoControl Z-Wave Garage Door Controller brings convenient control to one of a home's most frequently used entry points and works with a broad range of home control systems.

Las Vegas, NV – January 6-9 – International CES 2015 – Sands Booth #71039 - Nortek Security & Control, a Nortek company (NASDAQ: NTK) and a leader in the security and home control markets, introduces the GoControl® Z-Wave Garage Door Remote Controller (GDC). The GoControl® Garage Door Controller allows users to open, close, and monitor sectional garage doors from anywhere using a mobile device or other Z-Wave controllers. The product is now available under various private label brands as part of the Lowe's Iris, Nexia, ADT and Staples Connect home control systems, with more compatible systems expected soon.

"We are pleased at the rapid adoption we have seen for our GoControl Garage Door Controller with major system provider partners, as well as with end consumers. The garage door is one of the last entry points to be integrated into the smart home, and yet is one of the most frequently used points of entry," said Avi Rosenthal, VP of Security and Control Products at Nortek Security & Control. "Our GoControl Garage Door Controller is the first Z-Wave Garage Door product on the market making its ease of install and broad compatibility with established security and home control systems a unique advantage for consumers, service providers and retailers."

The GoControl® Garage Door Controller adds useful safety and control features with many practical applications for homeowners. Son or daughter locked out after school? Delivery man can't leave a package in the rain? Lying in bed and forgot to shut the garage door? All of these scenarios can be remedied with the GoControl® Garage Door Remote Controller. The controller can also trigger a scene within a smart home.

Garage doors are often the heaviest moving object in the home. Nortek Security & Control made safety and reliability a priority by designing the GoControl® Garage Door Controller to earn UL 325-2010 certification by providing both audible and visual warnings prior to any door movement, in addition to the standard safety features that already come with the garage door opener.

Setting up the GoControl® GDC is a simple process. Simply 'pair' the unit to the Gateway, mount the controller, connect two wires, and plug it in. The unit features a range of up to 100-feet between the wireless controller and the closest Z-Wave receiver module, so users can operate their garage from anywhere in the house. For remote access, it features an "unattended

mode.” Using a smartphone or other web-enabled devices, users can operate and monitor a garage door via the Internet at any time, or control it from any other integrated controller in the house.

The GoControl® Garage Door Controller also works with other Z-Wave enabled products as a wireless repeater to ensure that commands intended for another device within the mesh network are received. The more Z-Wave devices installed, the better the signal strength. This feature is helpful for interacting with devices that would otherwise be out of range.

In addition to the garage door controller, Nortek Security & Control manufactures a wide array of other smart home control products, including: light switches, LED light bulbs, thermostats, key fobs, door/window contacts, dimmer modules and wall outlets, which have been widely integrated into platforms such as Lowe’s Iris, Nexia, Staples Connect, ADT Pulse and more.

Strongly positioned with product portfolio synergies and the ability to cross-pollinate technology across the broader Nortek family, Nortek Security & Control provides a broad range of smart home solutions to OEMs, telecoms, major retailers, managed service providers, security dealers, custom installers and DIY consumers.
