Nortek Security & Control Launches New Family of GoControl Thermostats

Full line of smart thermostats delivers a breadth of options and connectivity with most home control systems.

Las Vegas, NV – January 6-9 – International CES 2015 – Sands Booth #71039 – Nortek Security & Control LLC, a Nortek, Inc. company (NASDAQ: NTK) and a leader in the security and home control markets, introduces the new family of GoControl® communicating programmable thermostats. Serving as a bridge between home control systems and a home's heating and cooling system, the GoControl® Thermostats provide remote control and intelligent programming of all thermostatic functions. The smart thermostat family includes Z-Wave® and Wi-fi connectivity options, enabling the company to address a range of markets, including: retail, security, HVAC, custom installation and DIY. This new line will be sold by multiple other Nortek businesses, outside of Nortek Security & Control, including Core Brands, LLC and others in 2015.

Installation, programming and control of GoControl® Thermostats is simple. The units can be hardwired into a home using existing thermostat wires, or in cases where there is no power, the smart thermostats can be powered by four AA batteries for up to three years of life. The line features LCD screens, both black & white, and color options, touch screen and non-touch screen versions, and easy on-screen setup of all thermostat functions. Across the entire family, GoControl® Thermostats are compatible with the majority of the existing control systems in the market today.

“Our GoControl Thermostat line is an exciting and strategic addition to our portfolio of smart connectable products, for one of the anchor categories in the connected home,” said Avi Rosenthal, vice president security and control products for Nortek Security & Control. “Unlike other smart thermostats, our GoControl Thermostat line is designed to be much more than a single point solution, providing broad market compatibility with most smart home systems, coupled with tiered features in product line options that deliver ideal solutions for both DIY retail, as well as the range of installer-based channels.”

The first products in the GoControl® Thermostat line will be available beginning spring 2015.

Strongly positioned with product portfolio synergies and the ability to cross-pollinate technology across the broader Nortek family, Nortek Security & Control provides a broad range of smart home solutions to OEMs, telecoms, major retailers, managed service providers, security dealers, custom installers and DIY consumers. Other connected products within the GoControl® ecosystem include Z-Wave® light switches, LED bulbs, security panels, garage door controllers, sensors and more.
