Linear Expands Home Automation Offerings with Z-Wave Lighting Products

The availability of Z-Wave wireless lighting control solutions provides Linear dealers, OEM partners and residential and commercial end users with smarter management and integration options.

Las Vegas, NV - ISC West 2013 – April 10-12, 2013 – [Linear LLC](#), a leader in innovative access control, security and health and wellness technology solutions, has added Z-Wave lighting products to its line of wireless residential and commercial offerings. The new products represent a benchmark for Linear as the company seeks to unify wireless lighting control products with existing security and access control systems, and other Z-Wave products.

Z-Wave is an international wireless standard for intelligent, interoperable, low-power, RF mesh networking technology. This powerful smart chip and compact protocol enable two-way RF communications among Z-Wave enabled devices. Linear is now manufacturing, selling and distributing Z-Wave lighting control products that include: wall dimmers, wall switches, wall outlets, lamp modules, appliance modules, 3-way switches/dimmers, fixture modules, as well as international versions of the same products. Linear will also utilize its extensive OEM resources to manufacture Z-Wave products for partner companies seeking their own intelligent lighting solutions.

The products also fit in nicely with Linear's recent acquisition of 2GIG Technologies since 2GIG's GO! Control platform is Z-Wave certified and provides an elegant and user-friendly control panel for the management of lighting, security, access control and more. Z-Wave enabled products represent the world's largest ecosystem of interoperable smart products giving Linear dealers more options and opportunities in a variety of segments.

"The addition of Z-Wave lighting products gives Linear customers access to a widely adopted wireless control protocol that is easy-to-install, modular, affordable and intelligent," said Duane Paulson, senior vice president of product and market development. "The extensive product

offerings and adoption of the Z-Wave protocol across many industries will create opportunities for Linear dealers in new and existing markets.”
